

ReadiGRAFT[®]

CryoSkin

Clinical Overview

ReadiGraft CryoSkin is cryopreserved human skin composed of frozen fibroblasts and keratinocytes and a fully developed extracellular matrix (ECM) in its epidermal and dermal layers. Cryopreserved human skin provides, upon application, a biological wound dressing for acute burn injuries and other soft tissue needs.

Applications

- Wound dressing for acute burn injuries and other soft tissue defects
-

Why Use

- **Biological Barrier:** Aids in thermoregulation while decreasing water and protein loss
- **Tensile Strength:** Collagen and elastin provide structural support and resilience
- **Biological Makeup:** Provides a broad spectrum of major growth factors, cytokines and collagen, recognized as relevant contributors to wound healing
- **Flexible:** Elastic properties
- **Long Shelf Life:** Store up to 5 years
- **Minimal Prep Time:** Less than 5 minutes

CryoSkin

Store frozen at temperatures between -40°C to -80°C
