

CardioGRAFT[®]

Pulmonary Patch

Clinical Overview CardioGraft Pulmonary Patch is a human pulmonary artery patch graft for cardiac outflow tract repair and reconstruction.

- Applications**
- Right Side/Pulmonary Reconstructions
 - Tetralogy of Fallot
 - Hypoplastic Left Heart Syndrome
 - Truncus Arteriosus
 - Transposition of the Great Arteries
-

- Features & Benefits**
- **Human Tissue:** Closely resembles autograft; compliant, flexible, easy to handle and suture.
 - **Resistant to Infection:** Natural ability to resist infection.^{1,2,3}
 - **Convenient:** Availability in various sizes to best fit the patient's anatomy.
 - **Reduced Thrombosis Potential:** Alleviates the need for anticoagulation therapy.^{3,4}
-

CardioGraft Pulmonary Patch		
Cryopreserved Storage (-120°C and Below), 7 Year Shelf Life		
Description	Size	Order Code
Trunk	W = 25 - 50 mm in 5 mm increments; L = 30 - 80 mm in 5 mm increments	PPGK
Branch	W = 25 - 50 mm in 5 mm increments; L = 30 - 80 mm in 5 mm increments	PPGN

Fragile. Store at liquid nitrogen (LN₂) vapor phase temperature (-120°C and below) and carefully follow the thaw and dilution instructions.

Instructions for use available at [LifeNetHealth.org/IFU](https://www.lifenethealth.org/IFU)
