

Autograft Processing and Storage from the Experts in Tissue Safety.

BEFORE

AFTER

Safety

- ☐ Meets FDA, AATB and Joint Commission standards
- ☐ Derived from Allowash XG[®] used to clean and disinfect over 5 million allograft implants with no incidence of disease transmission

Quality

- ☐ Reduction in operative expenses, as costly medical imaging instruments are not needed due to the congruent fit of the patient's own bone flap
- ☐ Secure and monitored storage

Service

- ☐ 24/7/365 Client Service representatives available
- ☐ Proven and trusted private courier service safely and efficiently transports grafts

What

OsteoCleanse offers an easy-to-use, turn-key solution for the removal, cleaning, and storage of the autologous tissue while affording the patient the benefit of having their own bone re-implanted.

LifeNet Health's OsteoCleanse is the first and only autologous cleaning and storage system. It reduces the potential for post-operative infection by providing a clean and disinfected graft.

Benefits

LifeNet Health developed the OsteoCleanse storage system to help hospitals stay ahead of evolving regulations in tissue storage.

Validated Kit

The validated OsteoCleanse Kit contains all materials necessary to safely package the graft for transportation and storage.

Secured Storage

Secure, monitored autologous tissue freezer storage — with back up controls in the event of an emergency.

Traceability

LifeNet Health tracks the autograft during shipping; and can provide monthly inventory reports upon request.
