VG2[®] PLIF

Clinical Overview Bio-implant designed with two cortical endplates supporting a cancellous center for PLIF procedures.

Applications Posterior Lumbar Interbody Fusion

- Features & Benefits**
- **Osteoconductive:** Large cancellous core facilitates early bone growth and remodelling in accordance with Wolff's Law.
 - **Stability:** Textured surface designed to reduce migration to enhance initial stability while optimizing surface area contact.
 - **Variety:** Multiple footprints in both parallel and lordotic configurations to better match patient anatomy and restore sagittal balance.
 - **Sterile:** Sterilized using proprietary and patented Allowash XG[®] technology. This technology provides a sterility assurance level of 10⁻⁶, without compromising the implant's inherent osteoconductive properties.¹
