

Fresh Osteochondral Plugs

Clinical Overview

Fresh Osteochondral Plugs are pre-cut and viable osteochondral allografts for restoring small osteochondral defects. The hyaline cartilage and intact bony scaffold provide a durable and natural restoration of the damaged area.

Applications

- Small osteochondral defect repair

Why Use

- **Convenience:** Created to precisely fit the recipient site when using the Arthrex® OATS® system
- **Compatible:** When used in conjunction with the Arthrex OATS system, the fresh plug will provide a line-to-line fit in the donor site. Graft can be easily downsized in diameter utilizing the Arthrex OATS kits
- **Patient-Friendly:** Eliminates donor site morbidity from allograft recovery. May decrease OR time due to decreased graft prep time. Less OR time can mean less time under anesthesia and less tourniquet time^{1,2}
- **Viable chondrocytes:** Validated aseptic processing and never frozen to ensure chondrocyte viability
