MatriGRAFT®
Iliac Crest Wedge

Clinical Overview
Tricortical iliac crest wedge, designed to provide immediate structural support and restore segmental bone loss

Applications
- High Tibial Osteotomies
- Pelvic Osteotomies
- Foot & Ankle Osteotomies
- Fracture Management
- Glenoid Reconstruction
- Anterior Cervical Discectomy and Fusion
- Corpectomy

Why Use
- Osteoconductive: Natural bone matrix facilitates cell attachment and proliferation, and vascular in-growth
- Structural: Tricortical plate provides immediate structural support
- 100% Human Bone: Can remodel with the patient’s own tissue during the healing process
- Pre-Hydrated: Allograft bio-implants featuring Preservon® are stored in a fully-hydrated state at ambient temperatures. Preservon eliminates thawing and re-hydration time and does not require freezer storage or compromise the graft’s inherent osteoconductive properties
- Sterile: Sterilized using patented and proprietary Allowash XG® technology which provides a sterility assurance level (SAL) of $10^{-6}$, without compromising the graft’s inherent osteoconductive properties
- Convenient: Implant is pre-sized to fit a variety of applications and minimize prep time in the operating room
