

# **Arthro**FLEX®

### BioWasher® Acellular Dermal Matrix

#### Clinical Overview

ArthroFlex BioWasher is a smaller-sized acellular dermal matrix intended for suture reinforcement in soft tissue repairs, such as the rotator cuff

#### **Applications**

- Suture reinforcement of soft tissue repairs
- Arthroscopic rotator cuff repair
- Plantar plate repair

#### Why Use

- Smaller Size: Easily passes through surgical portal for implantation in arthroscopic
- Increased Safety: Sterility Assurance Level (SAL) of 10<sup>-6</sup> means lower risk of disease transmission
- **Decellularized:** Uses Matracell® technology to remove ≥97% of DNA and cellular remnants to decrease likelihood of immune response<sup>1</sup>
- Promotes Rapid Healing: Biocompatible and retains natural growth factors, collagen and elastin.<sup>1</sup> Addresses most common mode of failure by reinforcing suture-tendon interface.<sup>2</sup>
- **Convenient:** Preservon® technology allows graft to be stored fully hydrated at room temperature (15°C - 30°C) so it can be used right out of the package, without lengthy OR reconstitution processes
