CardioGRAFT®
Hemi Pulmonary Artery (right or left)

Clinical Overview
Cryopreserved human pulmonary artery used for cardiac repair and reconstruction

Applications
Tetralogy of Fallot, Pulmonary Atresia, Outflow Tract/Root Reconstruction, Truncus Arteriosus, Transposition of Great Vessels, Hypoplastic Left Heart Syndrome, Pulmonary Stenosis/Atresia

Why Use
- Natural ability to resist infection
- Alleviates the need for anticoagulation therapy
- Reduced thrombosis potential
- Human tissue – Closely resembles autograft; compliant and flexible
- Forgiving and compliant to the native tissue. Easy to handle and suture, saving time.
