ArthroFLEX®

BioWasher®

Acellular Dermal Matrix

Clinical Overview

- ArthroFlex BioWasher is a smaller-sized acellular dermal matrix intended for suture reinforcement in soft tissue repairs, such as the rotator cuff

Applications

- Suture reinforcement of soft tissue repairs
- Arthroscopic rotator cuff repair
- Plantar plate repair

Why Use

- **Smaller Size:** Easily passes through surgical portal for implantation in arthroscopic procedures
- **Increased Safety:** Sterility Assurance Level (SAL) of 10^{-6} means lower risk of disease transmission
- **Decellularized:** Uses Matracell® technology to remove ≥97% of DNA and cellular remnants to decrease likelihood of immune response[1]
- **Promotes Rapid Healing:** Biocompatible and retains natural growth factors, collagen and elastin.[1] Addresses most common mode of failure by reinforcing suture-tendon interface.[2]
- **Convenient:** Preservon® technology allows graft to be stored fully hydrated at room temperature (15°C - 30°C) so it can be used right out of the package, without lengthy OR reconstitution processes
