PliaFX® Prime

Clinical Overview
PliaFX Prime is 100% bone fibers, demineralized to encourage bone formation and healing. The fibers interlock, allowing the graft to become moldable upon rehydration without the use of a carrier.

Applications
- Surgical procedures that require bone void filler

Why Use
- **100% Bone**: Facilitates natural remodeling during the bone healing process (no human, xenograft or synthetic carriers)
- **Osteoconductive**: The large surface area and interconnected network of demineralized cortical fibers provides a scaffold that promotes cellular attachment and cell spreading.1,2
- **Osteoinductive Potential**: Optimally demineralized by LifeNet Health’s proprietary PAD® technology to expose natural growth factors2,7
- **Versatile**: Moldable upon rehydration to conform to the surgical site
- **Resists Migration**: Interlocking fibers allow graft to remain intact and in place
- **Safety**: Sterilized using proprietary Allowash XG® technology, providing a sterility assurance level of 10^-6 to reduce the risk of disease transmission without compromising the graft’s osteoconductive properties or osteoinductive potential2,8
- **Convenience**: Ambient storage and rapid rehydration
