OraGRAFT® Prime

Clinical Overview
OraGraft Prime is 100% bone fibers, demineralized to encourage bone formation and healing. The fibers interlock, allowing the graft to become moldable upon rehydration without the use of a carrier.

Applications
- Surgical procedures that require a bone void filler

Why Use
- 100% Bone: Facilitates natural remodeling during the bone healing process (no human, xenograft or synthetic carriers)
- Osteoconductive: The large surface area and interconnected network of demineralized cortical fibers provides a scaffold that promotes cellular attachment and cell spreading.¹
- Osteoinductive Potential: Optimally demineralized by LifeNet Health’s patented and proprietary PAD® technology to expose natural growth factors²-⁶
- Versatile: Moldable upon rehydration to conform to the surgical site
- Resists Migration: Interlocking fibers allow graft to remain intact and in place
- Safety: Sterilized using proprietary and patented Allowash XG® technology, providing a sterility assurance level of 10⁻⁶ to reduce the risk of disease transmission without compromising the graft’s inherent osteoconductive properties or osteoinductive potential⁷
- Convenience: Ambient storage and rapid rehydration

- 100% bone fibers
- Moldable upon rehydration
- Hospitable environment for bone growth (cell attachment at one hour)
