

FlexiGRAFT®

Quadriceps Tendons

Clinical Overview

FlexiGraft quadriceps tendons can be used for ACL or PCL reconstruction procedures

Applications

- ACL Reconstruction
- PCL Reconstruction

Why Use

- **Convenience:** No timely recovery of autograft required, increase operating room efficiency
- **Patient-Friendly:** Eliminates donor site morbidity and associated pain from autograft recovery. This makes the procedure less invasive and potentially decreases OR time. Less OR time can mean less time under anesthesia and less tourniquet time¹
- **Sterile:** Quadriceps tendons are sterilized using proprietary and patented Allowash XG® technology. This provides a sterility assurance level (SAL) of 10⁻⁶, without compromising the construct's inherent biomechanical properties
