FlexiGRAFT®
Whole Patellar Tendon with Extensor Mechanism

Clinical Overview
FlexiGraft whole patellar tendon with extra quad tendon is used to reconstruct the knee’s extensor mechanism

Applications
Extensor Mechanism Reconstruction

Why Use
- **Convenience:** No time-consuming harvest required
- **Patient-friendly:** Eliminates donor site morbidity and associated pain from autograft recovery. This makes the procedure less invasive and potentially decreases OR time. Less OR time can mean less time under anesthesia and less tourniquet time¹
- **Sterile:** Patellar tendons are sterilized using proprietary and patented Allowash XG® technology. This provides a sterility assurance level (SAL) of $10^{-6}$, without compromising the construct’s inherent biomechanical properties

Reference
#### Whole Patellar Tendon with Extensor Mechanism

**Frozen Storage (-40°C to -80°C) / 5 year shelf life**
